Sprint Report 1

Vitae | Jan 27th 2026

Actions to stop doing

These are the activities or actions the team determined they should stop doing. This is the answer to the question, "What things should we stop doing?" The items should take the form of a brief description of what the team wants to stop doing, followed by a brief explanation. If there are no items, this section should describe why the team is completely satisfied with their current process.
Examples: The team should stop holding daily scrum meetings at 7am in the morning, because nobody can make that meeting time. The team should stop allowing daily scrum meetings to go over 15 minutes, because the meetings are less effective that way.

- We lose focus during scrum meetings, which in turn negatively affects the productivity and meaning of a 15-minute scrum.
- Need to be more strict with the 15-minute time limit because we don't want to spend too much time in meetings.

Actions to start doing

These are the activities or actions the team would like to start doing to improve their development process. This is the answer to the question, "What should we start doing?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.
Examples: The team should schedule more group work sessions, since these are very effective at getting work done. The team should be more accurate at estimating work tasks, since tasks were consistently under-estimated last sprint.

- We want to start the theme of having at least one weekly meeting in person, as this allows us to discuss on a real level: live demos, diagrams, and a more general understanding of one another and our progress.
- We should start implementing unit testing into our codebase in order to keep our changes consistent.

Actions to keep doing

This is the answer to the question, "What is working well that we should continue to do?" The items should take the

form of a brief description of what the team wants to start doing, followed by a brief explanation.

- Daily stand-ups/check-ins at 10 am are good through Discord. This allows us to keep track of everybody's status, even if no progress is being made on a team member's end, or if we can't physically meet.

Work completed/not completed

This is a list of the user stories that were completed during the previous sprint, and a list of the user stories not completed during this sprint (but which were part of this sprint, and were in the sprint plan).

Completed

- Sign In (2 points): As a user, I can sign in so that I can access my data.
- Session Persistence (2 points): As a user, I want to stay logged in across browser sessions so that I don't have to sign in every time.
- Add Canon Items (4 points): As a job applicant, I need to be able to enter my entire career history so that I can draw from it when making resumes.
- Edit Canon Items (4 points): As a job applicant, I need to be able to edit my career history so that I can correct errors.
- Deleting Canon Items (2 points): As a job applicant, I can delete career history items so that I can keep my records accurate.
- Viewing Canon Items (3 points): As a job applicant, I need to save and view my entire career history so that I can refer back to it at any time.

Work completion rate

This section should report the following: total number of user stories completed during the prior sprint. Total number of estimated ideal work hours completed during the prior sprint. Total number of days during the prior sprint. For the previous sprint, the user stories/day and ideal work hours/day figures should be reported. For sprints past the first sprint, this section should also provide the average user stories/day and average ideal work hours/day figures computed across all sprints to date. The final sprint burnup chart for the previous sprint should be available for viewing in the lab and an email of this chart sent to the TA/prof.

- Total number of user stories: 6
- Total number of estimated ideal work hours: 30
- Total number of days during the prior sprint: 14
- User Stories per day: 0.5
- Ideal work hours per day: 3
