Sprint Report 2

Vitae | Feb 10th 2026

Actions to stop doing

These are the activities or actions the team determined they should stop doing. This is the answer to the question, "What things should we stop doing?" The items should take the form of a brief description of what the team wants to stop doing, followed by a brief explanation. If there are no items, this section should describe why the team is completely satisfied with their current process.
Examples: The team should stop holding daily scrum meetings at 7am in the morning, because nobody can make that meeting time. The team should stop allowing daily scrum meetings to go over 15 minutes, because the meetings are less effective that way.

- Not completing spikes and infrastructure tasks before starting work on the User stories because they take up a large amount of time when starting to work on the main tasks at hand. This means that we should start doing research ahead of time rather than on the go.

Actions to start doing

These are the activities or actions the team would like to start doing to improve their development process. This is the answer to the question, "What should we start doing?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.
Examples: The team should schedule more group work sessions, since these are very effective at getting work done. The team should be more accurate at estimating work tasks, since tasks were consistently under-estimated last sprint.

- Ensure our CI/CD is running with the latest tests to test our changes before pushing to the main production branch.
- Work on spikes and infrastructure tasks ahead of time before the start of the sprint and before coding.
- We need to meet more often so that we can plan out sprints and decide tasks earlier

Actions to keep doing

This is the answer to the question, "What is working well that we should continue to do?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.

- Adding unit testing to completed user stories because it ensures that our changes don't "break" anything or cause emergent behaviors when merged.
- Daily stand-ups/check-ins at 10 am are good through Discord. This allows us to keep track of everybody's status, even if no progress is being made on a team member's end, or if we can't physically meet.

Work completed/not completed

This is a list of the user stories that were completed during the previous sprint, and a list of the user stories not completed during this sprint (but which were part of this sprint, and were in the sprint plan).

Completed

- Select Items for Resume (2 points): As a job applicant, I can select which career history items appear in my current resume so that I can tailor content for a specific job opportunity.
- Resume Reordering (3 points): As a user, I can reorder sections and items within my resume so that I can prioritize what matters most for an application or audience.
- Save Named Resumes (4 points): As a user, I can name and save my current resume so that I can retrieve it later.
- View Named Resumes (2 points): As a user, I can view my saved resumes so that I can look at past versions.
- Restore Named Resume (3 points): As a user, I can restore a saved resume to my working state so that I can continue editing or reuse it.
- Live preview (6 points): As a user, I can see a live preview of my resume as a formatted PDF so that I know what the final output looks like.

Not completed

- N/A

Work completion rate

This section should report the following: total number of user stories completed during the prior sprint. Total number of estimated ideal work hours completed during the prior sprint. Total number of days during the prior sprint. For the previous sprint, the user stories/day and ideal work hours/day figures should be reported. For sprints past the first sprint, this section should also provide the average user stories/day and average ideal work hours/day figures computed across all sprints to date. The final sprint burnup chart for the previous sprint should be available for viewing in the lab and an email of this chart sent to the TA/prof.

- Total number of user stories: 6
- Total number of tasks: 49
- Total number of estimated ideal work hours: 94
- Total number of days during the prior sprint: 14
- Previous sprint user stories/day: 0.5
- Previous ideal work hours/day: 1.5
- Average user stories/day: 0.5
- Average ideal work hours/day: 1.5
