Sprint Report 4

Vitae | March 10th 2026

Actions to stop doing

These are the activities or actions the team determined they should stop doing. This is the answer to the question, "What things should we stop doing?" The items should take the form of a brief description of what the team wants to stop doing, followed by a brief explanation. If there are no items, this section should describe why the team is completely satisfied with their current process. Examples: The team should stop holding daily scrum meetings at 7am in the morning, because nobody can make that meeting time. The team should stop allowing daily scrum meetings to go over 15 minutes, because the meetings are less effective that way.

- Working on tasks later in the sprint/procrastinating because it negatively impacts our daily work throughput and ability to explain the project to other team members.
- Working on product backlog items before finishing official user stories takes valuable time away from completing the actual work at hand.

Actions to start doing

These are the activities or actions the team would like to start doing to improve their development process. This is the answer to the question, "What should we start doing?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.
Examples: The team should schedule more group work sessions, since these are very effective at getting work done. The team should be more accurate at estimating work tasks, since tasks were consistently under-estimated last sprint.

- The team should be more precise with dividing tasks and user stories properly because sometimes they overlap greatly, which leads to some confusion.

Actions to keep doing

This is the answer to the question, "What is working well that we should continue to do?" The items should take the form of a brief description of what the team wants to start doing, followed by a brief explanation.

- Adhering to the style guide greatly improves the readability of the code and makes it easier to demo to the rest of the team.

Work completed/not completed

This is a list of the user stories that were completed during the previous sprint, and a list of the user stories not completed during this sprint (but which were part of this sprint, and were in the sprint plan).

Completed

- Diff check (3 points): As a user, I can compare two versions of my resume side-by-side so that I can see what changed between resume submissions.
- Quick build (3 points): As a user, I can paste a job description and see which canon items are most relevant so that I can quickly build a targeted resume.

- AI tailoring (4 points): As a user, I can get AI-suggested revisions of my experiences for a specific role so that I can tailor my language efficiently.
- View Tailoring Options (6 points): As a user, I want to see the space of tweaks that can reasonably be made to my resume item so that I don't have to reprompt an LLM over and over with ways to tweak it.
- Archive Bin (4 points): As a user, I would like deleted career items to be recoverable from a "Recently Deleted" bin so I can restore them or view them in older resume snapshots.

Not completed

- N/A

Work completion rate:

- Total number of user stories: 5
- Total number of tasks: 39
- Total number of estimated ideal work hours: 68
- Total number of days during the prior sprint: 14
- Previous sprint user stories/day: 0.5
- Previous ideal work hours/day: 1.6
- Average user stories/day: 0.4
- Average ideal work hours/day: 1.5
